What Are the Stars?

VOLUME 1

G Srinivasan

The outstanding question in astronomy at the turn of the twentieth century was: what are the stars and why are they as they are? In this volume, the story of how the answer to this fundamental question was unravelled is narrated in an informal style, with emphasis on the underlying physics.

Can Stars Find Peace?

VOLUME 2

G Srinivasan

This is the story of the life history of the stars, narrated in a lucid manner, with the necessary physics background developed in a systematic fashion. It describes the big developments of the 1930s—the great discovery by Chandrasekhar and the subsequent prediction of supernovae, neutron stars and black holes—and includes discussion of the modern perspective of stellar evolution.

Kariamanikkam Srinivasa Krishnan: His Life and Work

D C V Mallik and S Chatterjee

The first four decades of the twentieth century were glorious years for science, especially physics. Our view of the physical world changed forever with the emergence of quantum mechanics and Einstein's formulation of the theory of relativity. India too contributed significantly to this scientific revolution with the discoveries made by S N Bose, C V Raman and M N Saha, all in the space of about a decade. Kariamanikkam Srinivasa Krishnan (1898–1961) belonged to the same illustrious group. He was perhaps the only Indian physicist of his generation who was equally adept in theory and experiment. Besides a life of excellence in science, Krishnan's destiny led him to be an able science policy maker and administrator. He was also a great teacher, a humanist and a scholar of Sanskrit, Tamil literature and philosophy.

This biography, besides being a detailed and meticulously documented account of Krishnan's life and his scientific work, is also an exciting account of the history of Indian science of the period. The source material of this work, most of which are being used for the first time, comes from the private papers of K S Krishnan that had remained in the custody of his family.
