Solutions LLP

Plan your R&D and Technology based on a proper analysis of potential Socio-Economic Impact Assessment (SEIA) and Return on Investment

NCAS can take up SEIA of your planned, on-going or completed projects based on sound methodologies and traceable data. Our multi-disciplinary team of economists, engineers, scientists and data analysts uses modern techniques to provide scientific investment decision support.

Often R&D programmes are taken up based on subjective judgment and individual R&D interest. However, for publicly funded projects, it is imperative to ensure that these projects lead to high socio-economic impact. A proper SEIA thus should be an integral part of any large R&D project.

Translating
Clinical
Research to
Patient Care

Asian Healthcare Foundation (AHF), the research wing of Asian Institute of Gastroenterology was established in 2008 with an objective to unravel molecular basis of gastrointestinal disease.

AHF wishes to strengthen its clinical research activities in the areas of biochemistry and molecular biology, stem cell biology, cell based therapy, genetics, molecular medicine, biostatistics & bioinformatics and molecular diagnostics in the new facility being established at Gachibowli.

As part of its endeavors to intensify efforts in translating clinical research to patient care, we intend to recruit established **SCIENTISTS AND CLINICIANS** with proven track record for placement at the level of **Heads of Divisions and Group Leaders**,

Applications are also welcome from aspirants/ awardees of prestigious recognitions such as the Shanthi Swaroop Bhatnagar Award, Ramalingaswamy Fellowship and DST-INSPIRE Faculty Award.

Apart from providing cutting edge technical facilities in a dynamic environment involving synergistic interactions between clinicians and basic scientists, the positions would offer remuneration and work benefits at international standards and performance-based incentives.
