AUTOMATING THE ACADEMIC REVIEW PROCESS

... "There are two ways in which electronic processing may be of use in the review process: the first is as an aid in the selection of referees as well as in maintenance of review records. . . . ; the second is in the use of electronic mail systems. A computer record of referees can be supplemented with much more information than can be contained in a card index and can be scanned much more conveniently. One useful adjunct is a synopsis or key-word profile of areas of expertise for each referee. It is then a simple matter for

the editor to have the computer search the referee file for names of people who are expert in the particular subject area of a newly submitted paper."
