MILLIPORE

STOP RUNNING IN CIRCLES
FOR YOUR STERILE FILTRATION NEEDS

1. Clean filtration unit thoroughly
2. Then, fix the membrane
3. Next, assemble the filtration unit
4. Tighten the assembly
5. Wrap the assembly
6. Then, carry the unit to an Autoclave
7. Wash and also maintain temperature at 121°C/15 psi for 15 minutes
8. Wait for 45 minutes for the unit to cool
9. Carry unit to Laminar Airflow
10. Finally, after what seems like ages, filter the solution

Millex Filter Units for Sterile Filtration That’s Quick and Easy

Conventional Sterile Filtration can take hours and also be very inconvenient. Because there are so many steps involved. Millex Sterile Disposable Filters make your life easy. Now you can filter in just two quick and easy steps.

Millex Sterile Disposable Filters are a standard in labs all over the world for low volume Sterile Filtration up to 200mL. They are also superior with faster flow rates, superior flow or extremely low protein binding. The new Millex 33mm is superior to other filter units with its super-fast flow rates.

So, whether you are doing Sterile Filtration or just about any other application, RELAX! And say goodbye to tiresome Sterile Filtration forever.
