**Research Position in Tomato Functional Genomics**

At University of Hyderabad, we are having a vibrant group on Tomato Functional Genomics, which is working on TILLING (Targeting Induced Local Lesions IN Genomes) and fruit ripening in tomato. Some of the current aims of the group include using reverse genetics to isolate tomato mutants delayed in ripening, having high lycopene content in tomato fruits and analysis of light and hormonal signal transduction pathways. For recent publications of the group see Plant Physiol., 133: 113–125; Plant Physiol., 134: 790–800; Comparative and Functional Genomics, 6: 153–158; Plant Cell Environment, 29: 701–709; Theoretical and Applied Genetics, 113: 673–683 or http://phototropism.tripod.com/index.html.

We have one position open at post-doctoral research associate level. The research associates would be offered fellowships of Rs 11,000 pm + HRA (to be revised to Rs 16,000 pm + HRA). Applicants should have experience in plant molecular biology preferably supported by publications. Ph.D. in molecular biology, biochemistry, genetics, or a related field is required. Candidates interested in above position should send their CV, a statement clearly explaining how their skills are relevant to the position and the name/contact information for three references.

The candidates can send their application by post or by e-mail at rameshwar.sharma@gmail.com before 10 September 2007.
