The SBRI-India Global Infectious Diseases Training Program involves collaborative research training projects, specialized workshops, and video lectures on Malaria, Leishmaniasis, Tuberculosis, and other intracellular pathogens.

The Program invites applications from promising Indian Ph.D. students and postdoctoral scientists for advanced training. Fellowships for postdoctoral scientists will be funded for two years to train on collaborative projects at Jawaharlal Nehru University (JNU) or the International Center for Genetic Engineering and Biotechnology (ICGEB) and at a laboratory at the University of Washington (UW) or Seattle Biomedical Research Institute (SBRI) in Seattle, WA, USA. Up to one year of these fellowships will be spent in a laboratory in Seattle. Additional fellowships are available for students in the PhD degree programs at JNU or ICGEB to spend up to six months in one of the Seattle laboratories on a collaborative project.

Applicants will be assessed on the basis of academic record, letters of recommendation, a statement of career goals related to global infectious disease, and a brief statement of research interests. In addition, for postdoctoral scientists the publication record will be considered.

Please visit our website at http://www.sbri-india-gld.org for further details about the program and applications. Applications should be received by 30th April. The training program will also sponsor workshops and video lectures.

All trainees should take up their position within 1 year of the closing date.

This program is supported by the Fogarty International Center of the U.S. National Institutes of Health and is directed by Drs. Kenneth Stuart and Marilyn Parsons of SBRI and Rentala Madhubala of JNU.
